

C1 REAL-FILL KILL TEST

深度回补做市：从显示回补到真实成交下界

EXPLORATORY_NON_GATE — 所有金额均为手续费前的 gross markupout；只有成交后可见退出深度属于 executable，剩余数量保留合法价格上下界。本报告不是净利润，也不授权任何实盘订单。

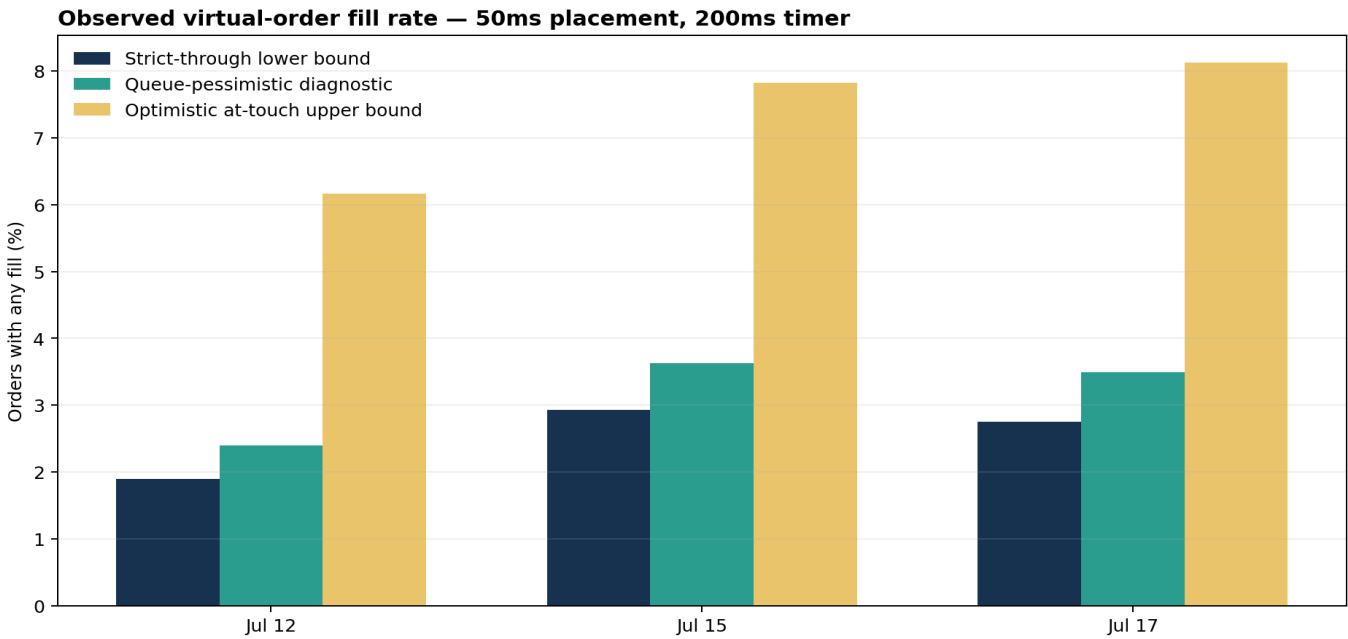

Verdict: INDETERMINATE_MORE_CLEAN_DAYS

PRIMARY strict-through legal-price censoring bounds overlap zero, or a required date/timer cell has no support

Clean dates	Primary eligible	Strict filled	Strict rate
3	197,481	4,994	2.529%

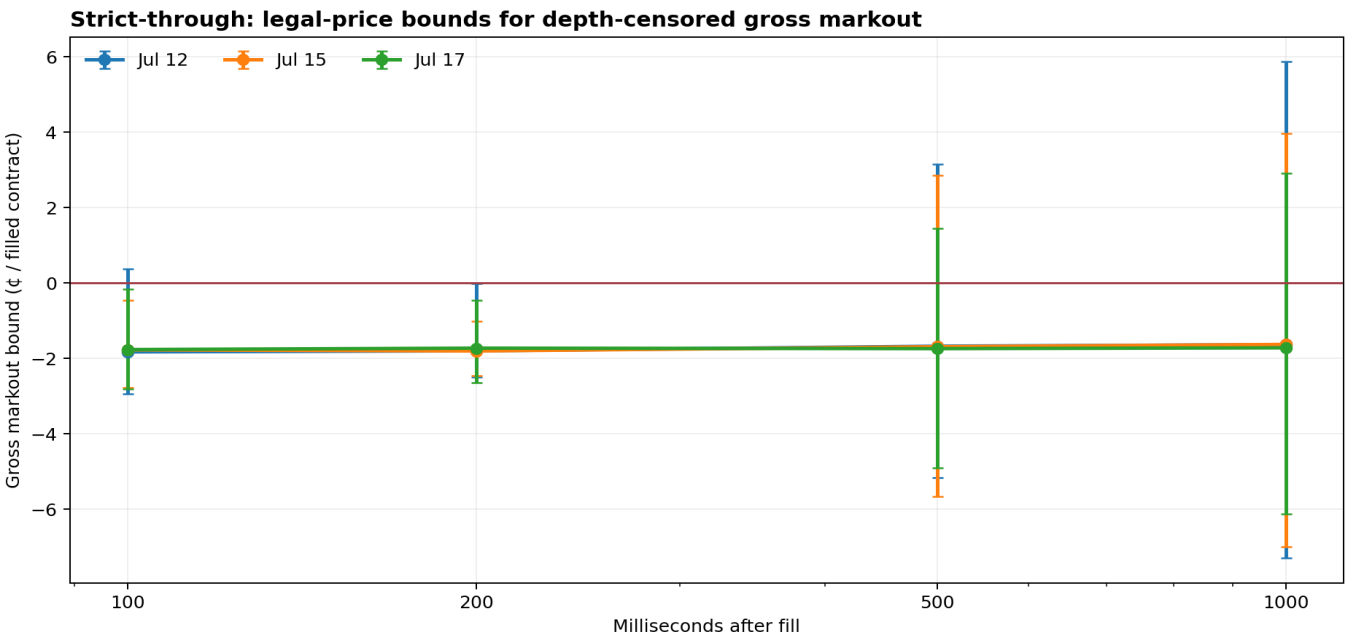

主结果只使用 strict-through：等价成交不算填单。Queue-pessimistic 与 optimistic-at-touch 只展示模型带宽。未来盘口必须严格晚于成交，且可执行量受顶档深度限制；censor 数量通过合法价格上下界进入决策。三天逐日报告，不进行 t 检验或显著性声明。

1. 三轨成交率

Source CSV 与本图同目录；gross ≠ net。空缺、非成交后、跨 epoch、过期状态及退出深度不足均进入 censor 数量和合法价格界。

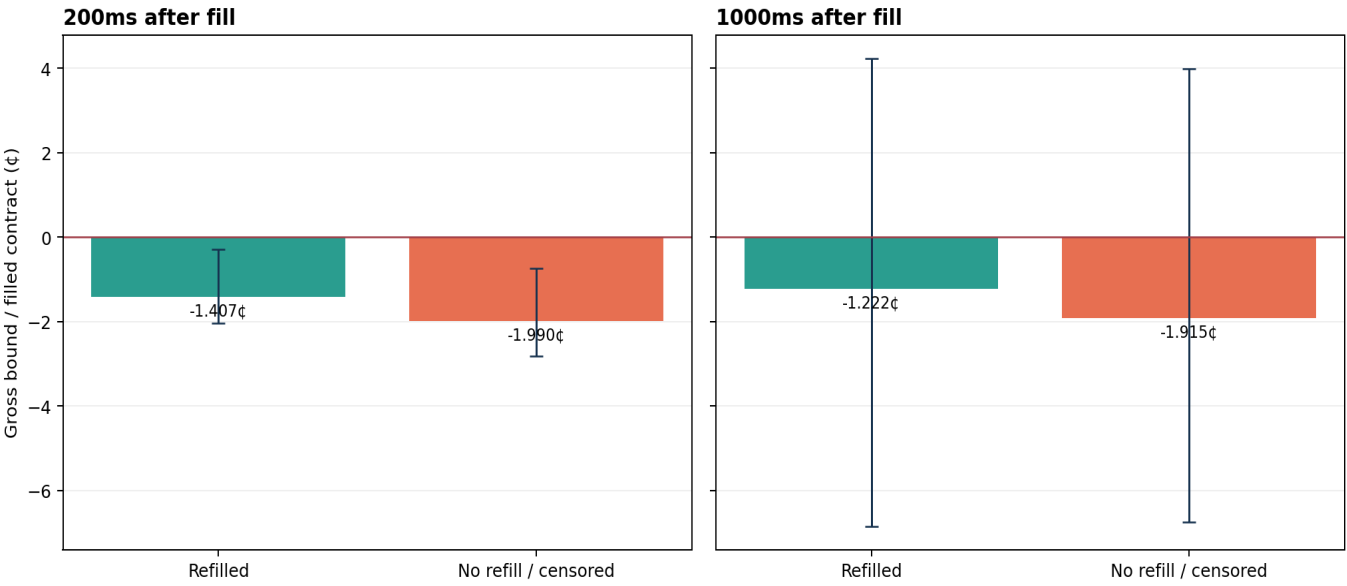

2. 严格穿价成交后的 gross markup 上下界

Source CSV 与本图同目录；gross ≠ net。空缺、非成交后、跨 epoch、过期状态及退出深度不足均进入 censor 数量和合法价格界。

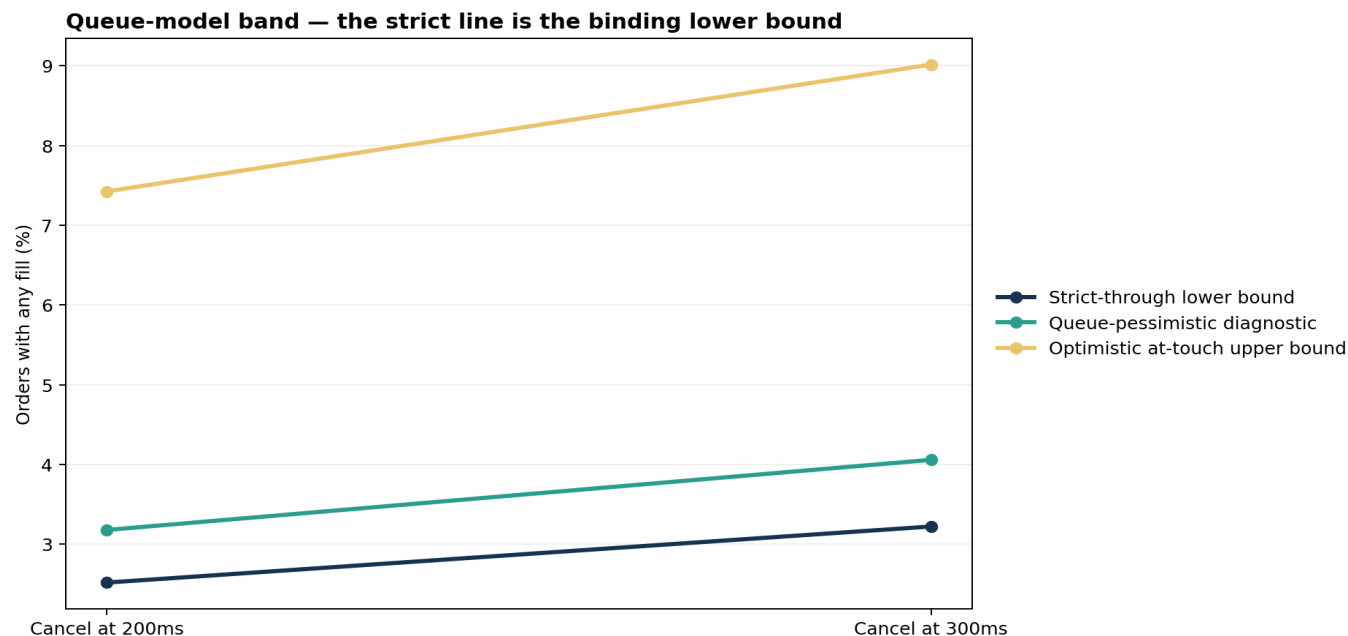

3. 回补 / 不回补的逆向选择上下界

Adverse-selection attribution — descriptive, not a net-PnL ledger

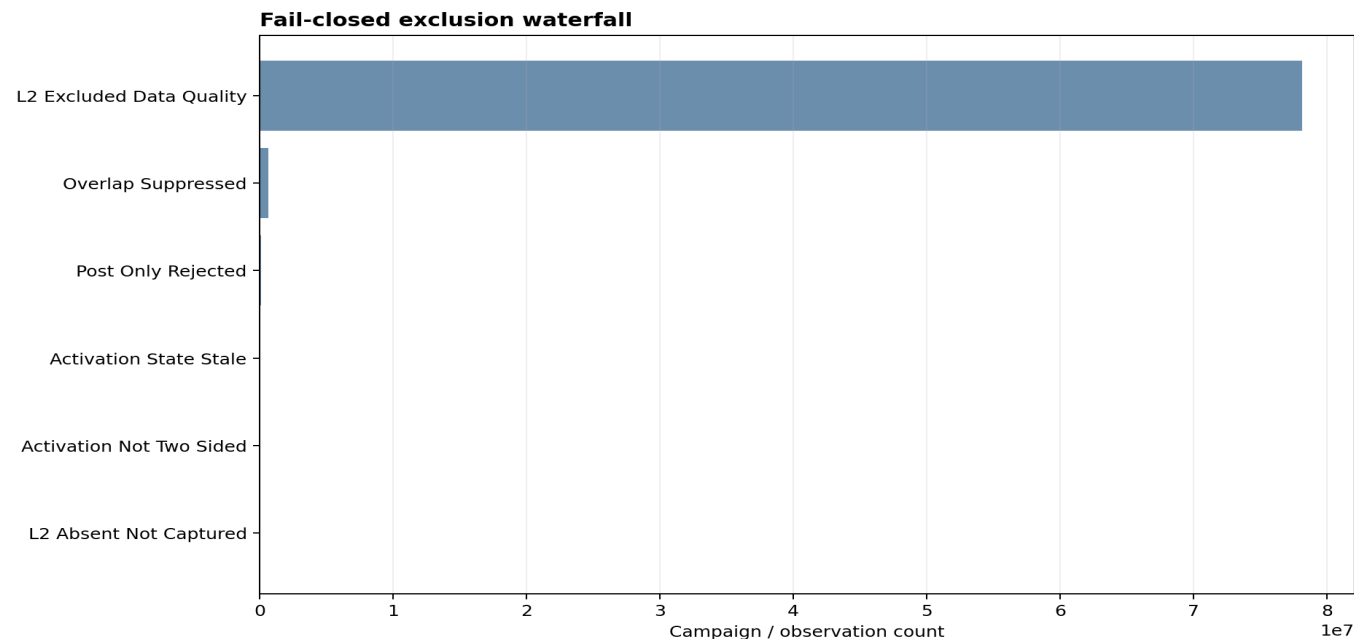

Source CSV 与本图同目录；gross ≠ net。空缺、非成交后、跨 epoch、过期状态及退出深度不足均进入 censor 数量和合法价格界。

4. 队列模型带宽

Source CSV 与本图同目录；gross ≠ net。空缺、非成交后、跨 epoch、过期状态及退出深度不足均进入 censor 数量和合法价格界。

5. Fail-closed 排除瀑布

Source CSV 与本图同目录；gross ≠ net。空缺、非成交后、跨 epoch、过期状态及退出深度不足均进入 censor 数量和合法价格界。

为什么现在仍不能说“赚钱”

精确版本未闭合逐成交历史 fee change、全部 event override、账户舍入精度与订单级 accumulator ; 5/50/500ms 也是预注册压力值而不是生产实测。故 fee-after net PnL、容量、日利润和 G3 晋级全部 fail closed。

下一决策

若 verdict 保留候选：补齐费用证据与生产 place/cancel latency，继续累计至少 20 个干净 L2 日后进行按日 train/validation。若 verdict 淘汰：保留深度不回补作为撤单/退出信号，不再把 C1 当进攻性做市策略。
